

Economics 114 Written Feedback A1 2024

Question 19

- 19.1 Many just said "Wookies or Ewoks" without indicating their absolute advantages. Some people did the right calculations, but didn't interpret it correctly.
- 19.2 They answered this generally well.

Question 20

- 20.1 Most students answered this question correctly. Those who answered incorrectly, confused dominated and dominating/ dominates and switched the two around. Many students often added E as dominated, which was incorrect.
- 20.2 This question was mostly answered correctly. Students knew that the cheapest option was C and would be chosen. Those who got the answer wrong, either: skipped the question altogether confusing 20.3 and 20.2 and, most of the students who got this question wrong chose A as the cheapest option. Other mistakes here are calculation errors. Those who used relative costs did not receive the marks.
- 20.3 Same as 20.3. Most students answered this question correctly. Those who answered incorrectly were mainly because of calculation errors. Other mistakes were choosing C as the most preferred technology (the incorrect technology chosen). Some students also combine 20.3 and 20.4, and only received marks for the one answered correctly.
- 20.4 Most students answered this question correctly, and correctly calculated the new technology and agreed new technology would be used. Those who answered incorrectly did so because of the incorrect answers calculated in previous answers. Some also compared the new technology to the incorrectly calculated technology of before (20.2's answer).

Question 21

Most of the students could give a formal definition of the income and substitution effect, however, most did not manage to link it with the given scenario. I gave 1 mark for definition, $1\frac{1}{2}$ marks for correctly linking the definition to the stated scenario, $2\frac{1}{2}$ marks for identifying which effect dominates for each individual and a reason behind that. Some even indicated the effects by drawing the graph, but this did not yield any mark as the graph was not required. Majority got an average of 3 out of 5 marks.

Question 22

Many did not include the letters for the graph as a reference and some swapped around the transitions. Hence they got lower marks.

Question 23

- 23.1 Some just wrote the payoff scores and lost a mark.
- 23.2 Many did well here. There are still a few that did not understand the concepts involved.
- 23.3 Some struggled with this question. They mainly said a large fine but then said a number smaller than 9. Hence, obvious confusion about how to approach this question.

Question 24

- 24.1 Generally, many people were confused about answering this question. Many did not fully answer the question. Many people understood that Karabo was using more energy to work, but they didn't say that she needed more grain to substitute for using more energy.
- 24.2 Only a few got this correct. which was an easy question just reading off the graph.
- 24.3 Many said only the RIC and BIC will move, not the FF.
- 24.4 Some got confused between Diplo and Karabo so they mixed up the preferences.
